Workshop 2: PoCUS - Mastering EFAST & RUSH

April 28th & 29th | Crowne Plaza

WORKSHOP 1

Tuesday April 28th
2:30 PM - 4:30 PM

FONA: Critical Airway Access

Front of neck access is a high acuity, low occurrence (HALO) procedure that is an essential emergency airway management skill for all critical care clinicians.

Gain valuable insights into when and how to act in order to provide safe and timely oxygenation in the critically unwell.

Dissolve the fear and stigma associated with this procedure through hands-on, high volume repetition practicals so that you can execute when called upon.

Join us to build the confidence, competence, and muscle memory necessary to perform a surgical airway, because in that pivotal moment, progressing to FONA is not a failure - it's a critical lifesaving procedure!

WORKSHOP 2

Wednesday April 29th
2:30 PM - 4:30 PM

PoCUS: Mastering EFAST & RUSH

Learn from expert clinicians how to rapidly assess and diagnose the causes of undifferentiated shock and trauma at the bedside.

Through case based discussions and a practical group session involving hands on scanning you'll master the systematic techniques of EFAST and RUSH focusing on both the acquisition and interpretation of images in the shocked patient.

Build confidence in your scanning abilities and incorporate these core skills into your daily practice to expedite clinical care in the critically unwell.

Supplemented by educational modules that can be accessed at any time - join us and become proficient in rapid diagnostic point of care ultrasound!
